(54) Title: A DEVICE HAVING SEAL COATINGS FOR RECEIVING AND DISCHARGING FLUID

(57) Abstract: The present invention features devices and methods for holding fluids at high pressures and a device for receiving and discharging fluids. The device comprises a first housing having at least one side wall. The side wall has an interior surface defining at least one chamber and has at least one end cap abutment surface for receiving an end cap. The end cap has a first housing abutment surface which receives the end cap abutment surface positioning the end cap on the first housing for enclosing the chamber. At least one of the first housing abutment surface and the end cap abutment has a first seal coating. The first seal coating comprises a deformable plastic adhering to the abutment surface. The device further comprises compression means to compress the end cap and deform the seal coating.
